

a Experiment workflow iterate on the CPU plant, confirm on Isaac Sim; both backends write the same run directory

b Run directory runs/<UTC>_<id>/; who writes each file, and when

file	written by	when	content
config.json	RunRecorder	start	resolved config (after extends, --set)
metadata.json	RunRecorder	start	backend, plan + feasibility, phases, git, argv
telemetry_schema.json	RunRecorder	start	units, frames, sampling of every CSV column
telemetry.jsonl	RunRecorder	each step	full record + finished / aborted
basic.csv	RunRecorder	each step	flat SI columns: ideal, actual, error
metrics.json	MetricsHook	finalize	overall + per-phase flight metrics
plots/*.png	FiguresHook	finalize	trajectory, tracking, motors, wrench
*.mp4, video_frames.jsonl	VideoHook	sim clock	per camera + mosaic (isaacsim)

One telemetry.jsonl line (physics step k , interval $[t_k, t_{k+1}]$)

c Evidence levels what each level can and cannot show
